COURSE PRACTICE WORKSHEET

Interactive cart practice

Work through these four exercises, then compare your result with the lesson examples.

1. Model the items

Create two item objects with label, price and quantity. Keep them in an array and compute each line total.

2. Write a calculation

Write a function that accepts price and quantity and returns their product. Test zero quantity and a normal item.

3. Handle an event

Connect a button click to a quantity change. Update a summary element using textContent.

4. Test boundaries

Check the delivery threshold below, at and above its boundary. Record input, expected message and actual message.
