COURSE PRACTICE WORKSHEET

Component and state review

Work through these four exercises, then compare your result with the lesson examples.

1. Draw the tree

Sketch a product list, product card and cart summary. Give each component a single clear responsibility.

2. Choose the owner

Mark the common owner of cart state. Derive totals from item data rather than storing a second total.

3. Review interactions

Write down the events that change state. Identify any external subscription and its cleanup.

4. Verify reuse

Render two products, reorder them and operate every control by keyboard. Check keys, labels and focus visibility.
